

Driving Instructor's BEST FRIEND

Emergency Brake Accelerator Cut-off System

The DRIVING INSTRUCTOR'S BEST FRIEND is a revolutionary new safety technology that has been developed to assist Driving Instructors in emergency situations.

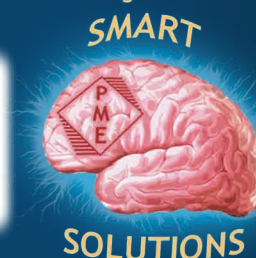

Should the Instructor find themselves in a dangerous situation and need to apply the dual-brake, the vehicle's accelerator is reduced to idle speed. The vehicle's power-steering and boosted-brakes remain operational, making this system vastly superior to an undesirable engine kill switch.

- Smart microprocessor technology
- Cuts engine speed back to idle to retain POWER STEERING and BOOSTED BRAKES on emergency stop unlike undesirable engine kill switch
- System can be turned off or on as required. Complete with control box and flashing LED indicator lights
- Adaptable to any type of dual control pedal control assembly; Manual or Automatic
- Installs to any vehicle with Drive-By-Wire configuration
- Interchangeable when upgrading vehicles
- Easy DIY installation kit complete with switch assembly, ECU and instructions.
- Comes complete with mounting hardware
